in socratic method and critical philosophy leonard nelson defends and revitalizes the dialogical method of inquiry championed by socrates as a model for rational thinking he argues that true philosophy begins not with dogma but with open ended questioning and ethical reflection nelson applies this approach to kantian and neo kantian themes emphasizing moral autonomy and logical precision his work champions the role of critical philosophy in education ethics and democratic discourse a passionate advocate for clarity and intellectual honesty nelson s writing is both a tribute to socratic legacy and a guide for modern philosophical practice

for two reasons we are particularly proud to include wolfgang brezinka s philosophy of educational knowledge in this series of books on philosophy of education the first is the philosophical interest of the work itself its remarkable scholarship and the importance of the philosophical positions will be obvious to all readers the second is that it brings to the english speaking world a wonderful example of educational philosophy as now being practiced in the german speaking world all too often philosophers in the anglo american tradition have not seen the sort of perspective on educational thinking that infuses this work and since this book has been widely read in its original version it has had a considerable impact upon philosophy of educational research and science in the german speaking countries an understanding of this may help in the development of even more cooperative relations among students of education in all countries c 1 b macmillan d c phillips preface to the english edition 1 am not unmindful how little can be done in a mere treatise on logic or how vague and unsatisfactory all precepts of method must necessarily appear when not practically exemplified in the establishment of a body of doctrine doubtless the most effectual mode of showing how the sciences may be constructed would be to construct them john stuart mill 1843 1 parents have a duty to educate their children teachers to educate their pupils for this reason there is widespread interest in education knowledge of education has long been offered under names like pedagogics pedagogy or educational theory originally this meant practical knowledge based on common sense since the enlightenment however attempts have been made to acquire scientific knowledge of education
